Par 3

This is a short par three. Your seven or eight iron is a good choice. Keep your approach below the hole. Stay out of the right front bunker.

A natural wetland frames the left side of this hole and the right side of the green. Wetlands provide breeding, nesting and feeding grounds for a great diversity of wildlife.

Par 3

Stay out of the Mickey
bunker on this
famous par three.
Use a long- to
mid-iron off
the tee.

Natural
wetlands are
found to
the right and
behind the green
where a woodpecker
house has been built.
Wetlands not only
provide excellent
habitat, they also help
prevent flooding, help
recharge groundwater
supplies and filter storm
water runoff.

Par 3

Shoot for the middle of the green. If you miss, it's difficult getting up or down from the bunkers.

This hole boasts water along the entire right side.

27

A lake runs along the entire right side of this hole.

Where possible, shoreline turfgrass is allowed to grow taller to act as a natural filter and aid in keeping our waterways cleaner.

Par 3

This hole has an elevated tee shot. Use a mid- to long- iron. The green has a lot of undulation.

The lake to the right of the main tee features planted aquatic vegetation. A butterfly box has been built to the right of the main tee.
